

The applications you need require performance.

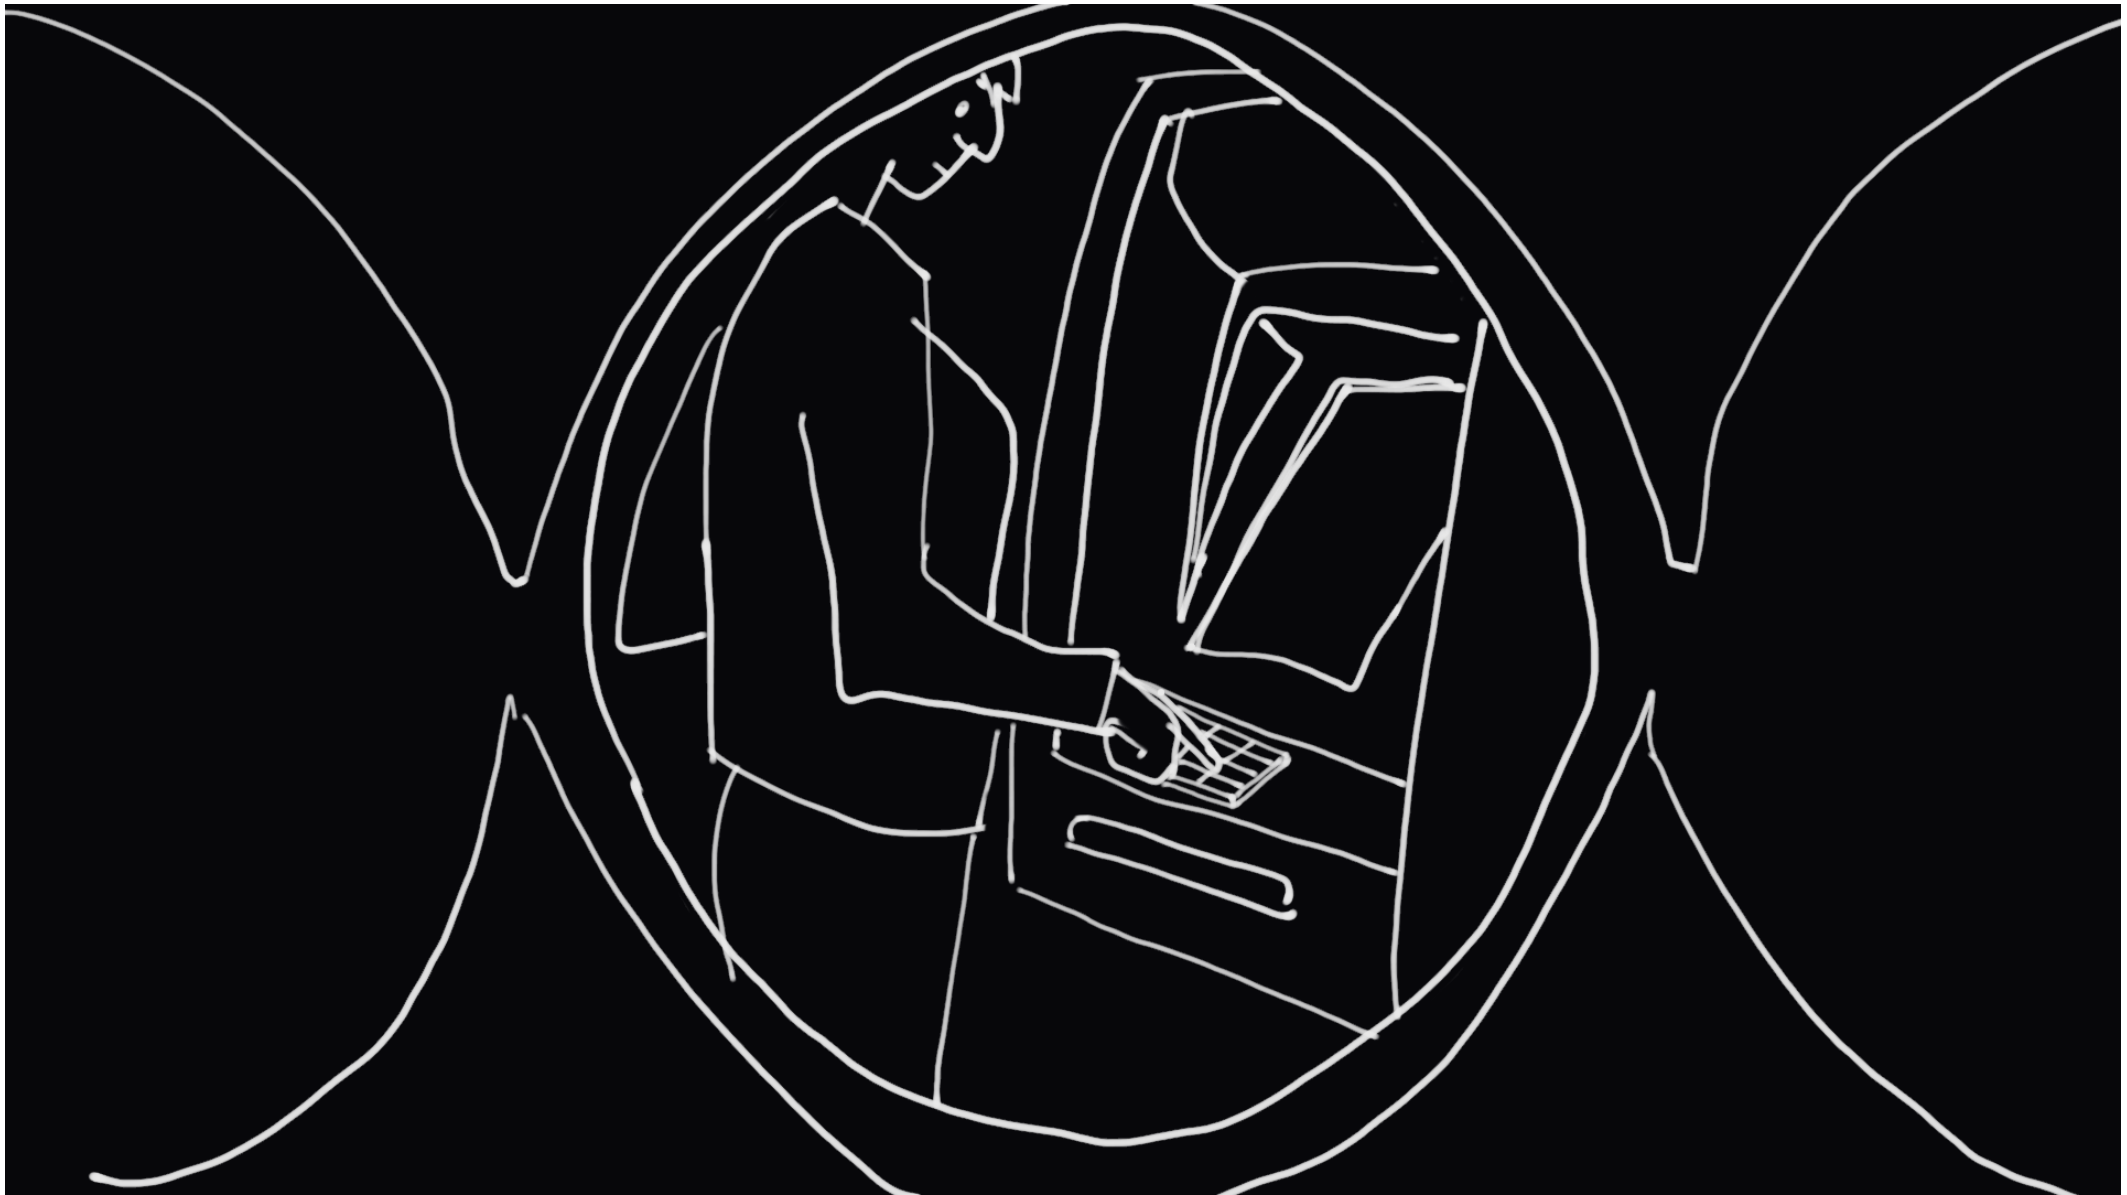

The performance of a real-time enterprise.

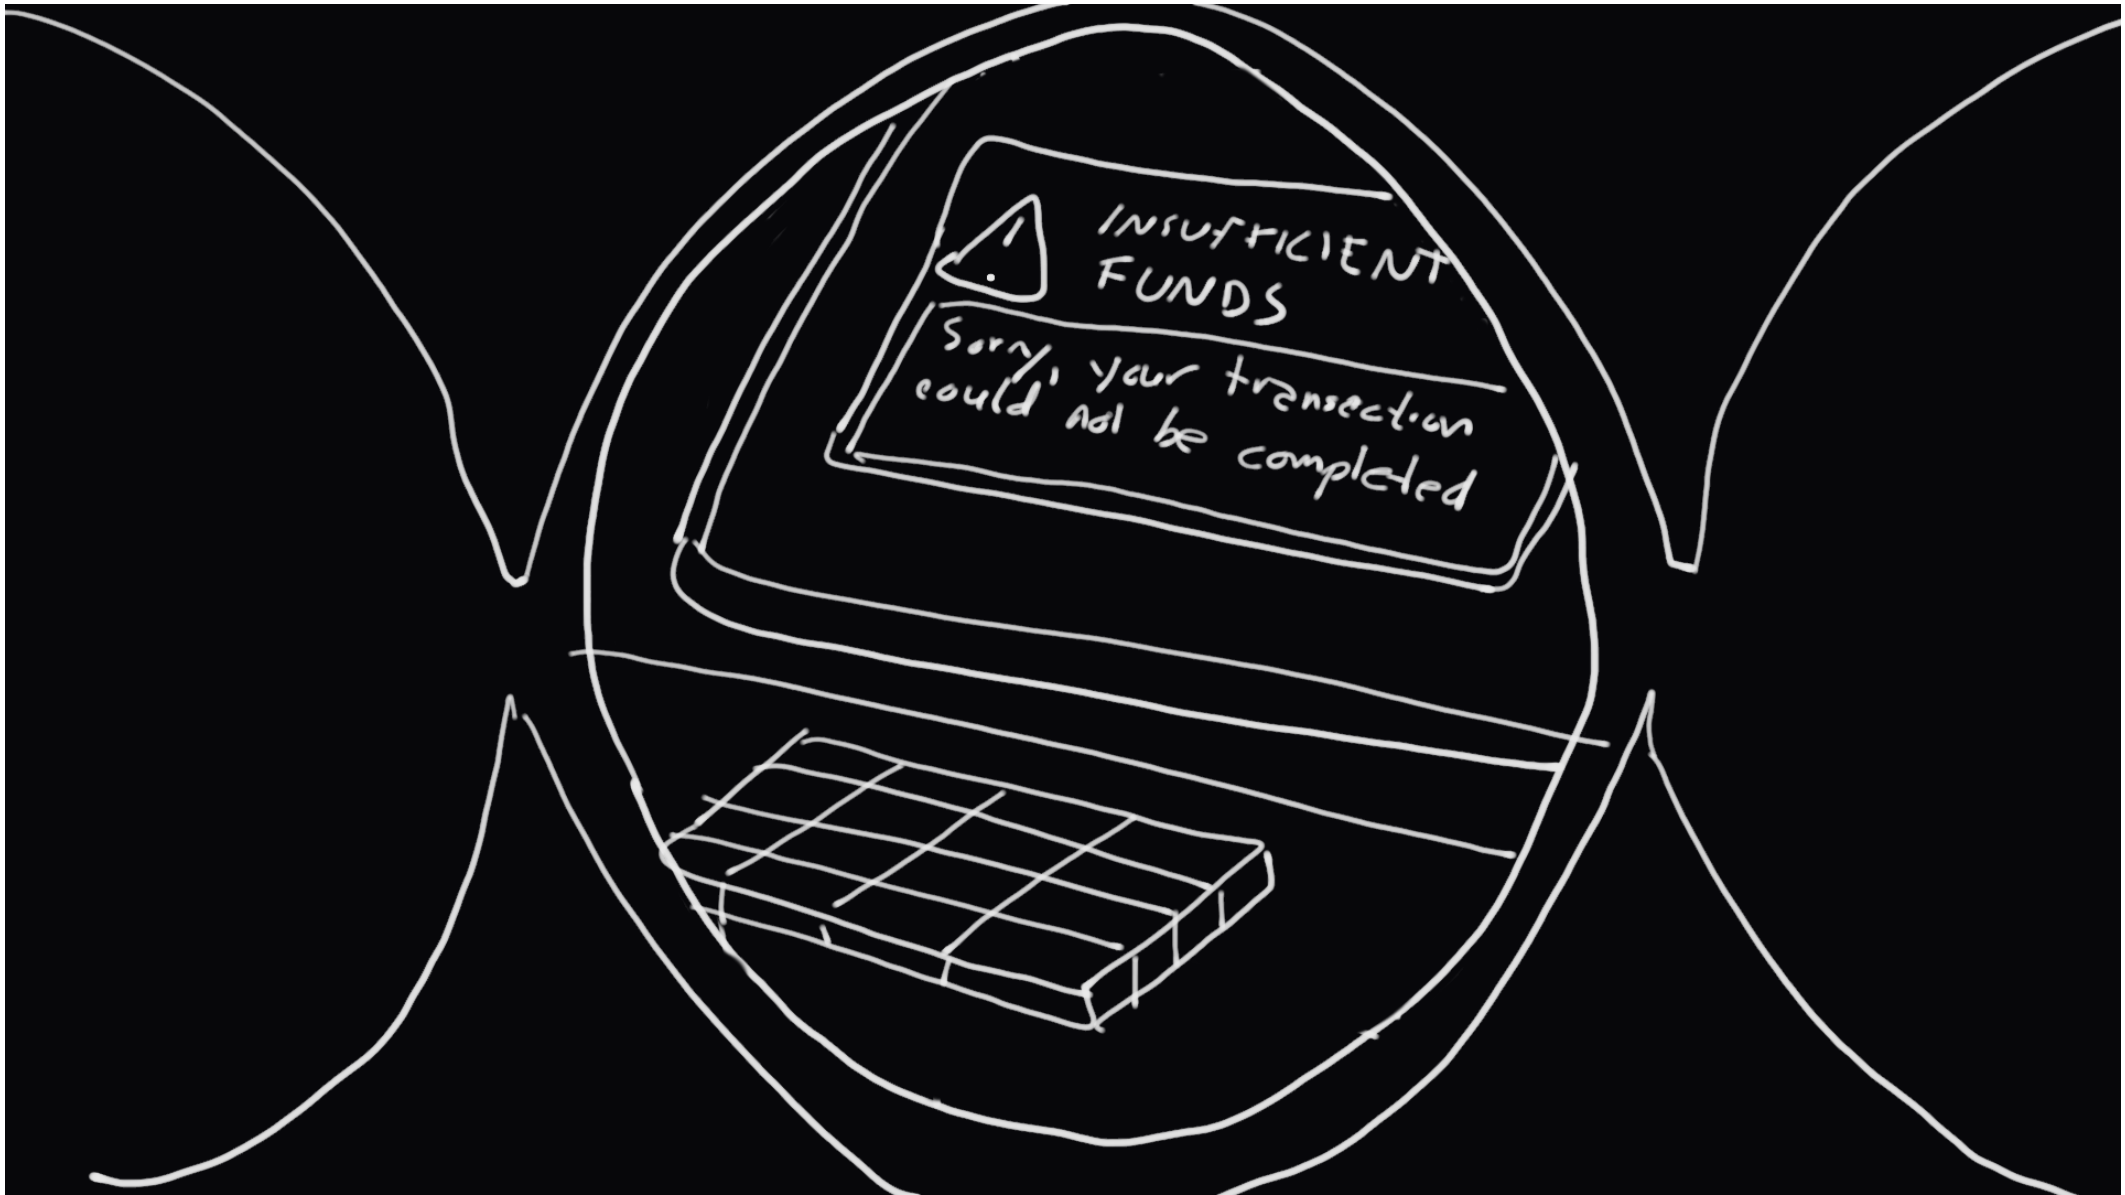

(zoom in)

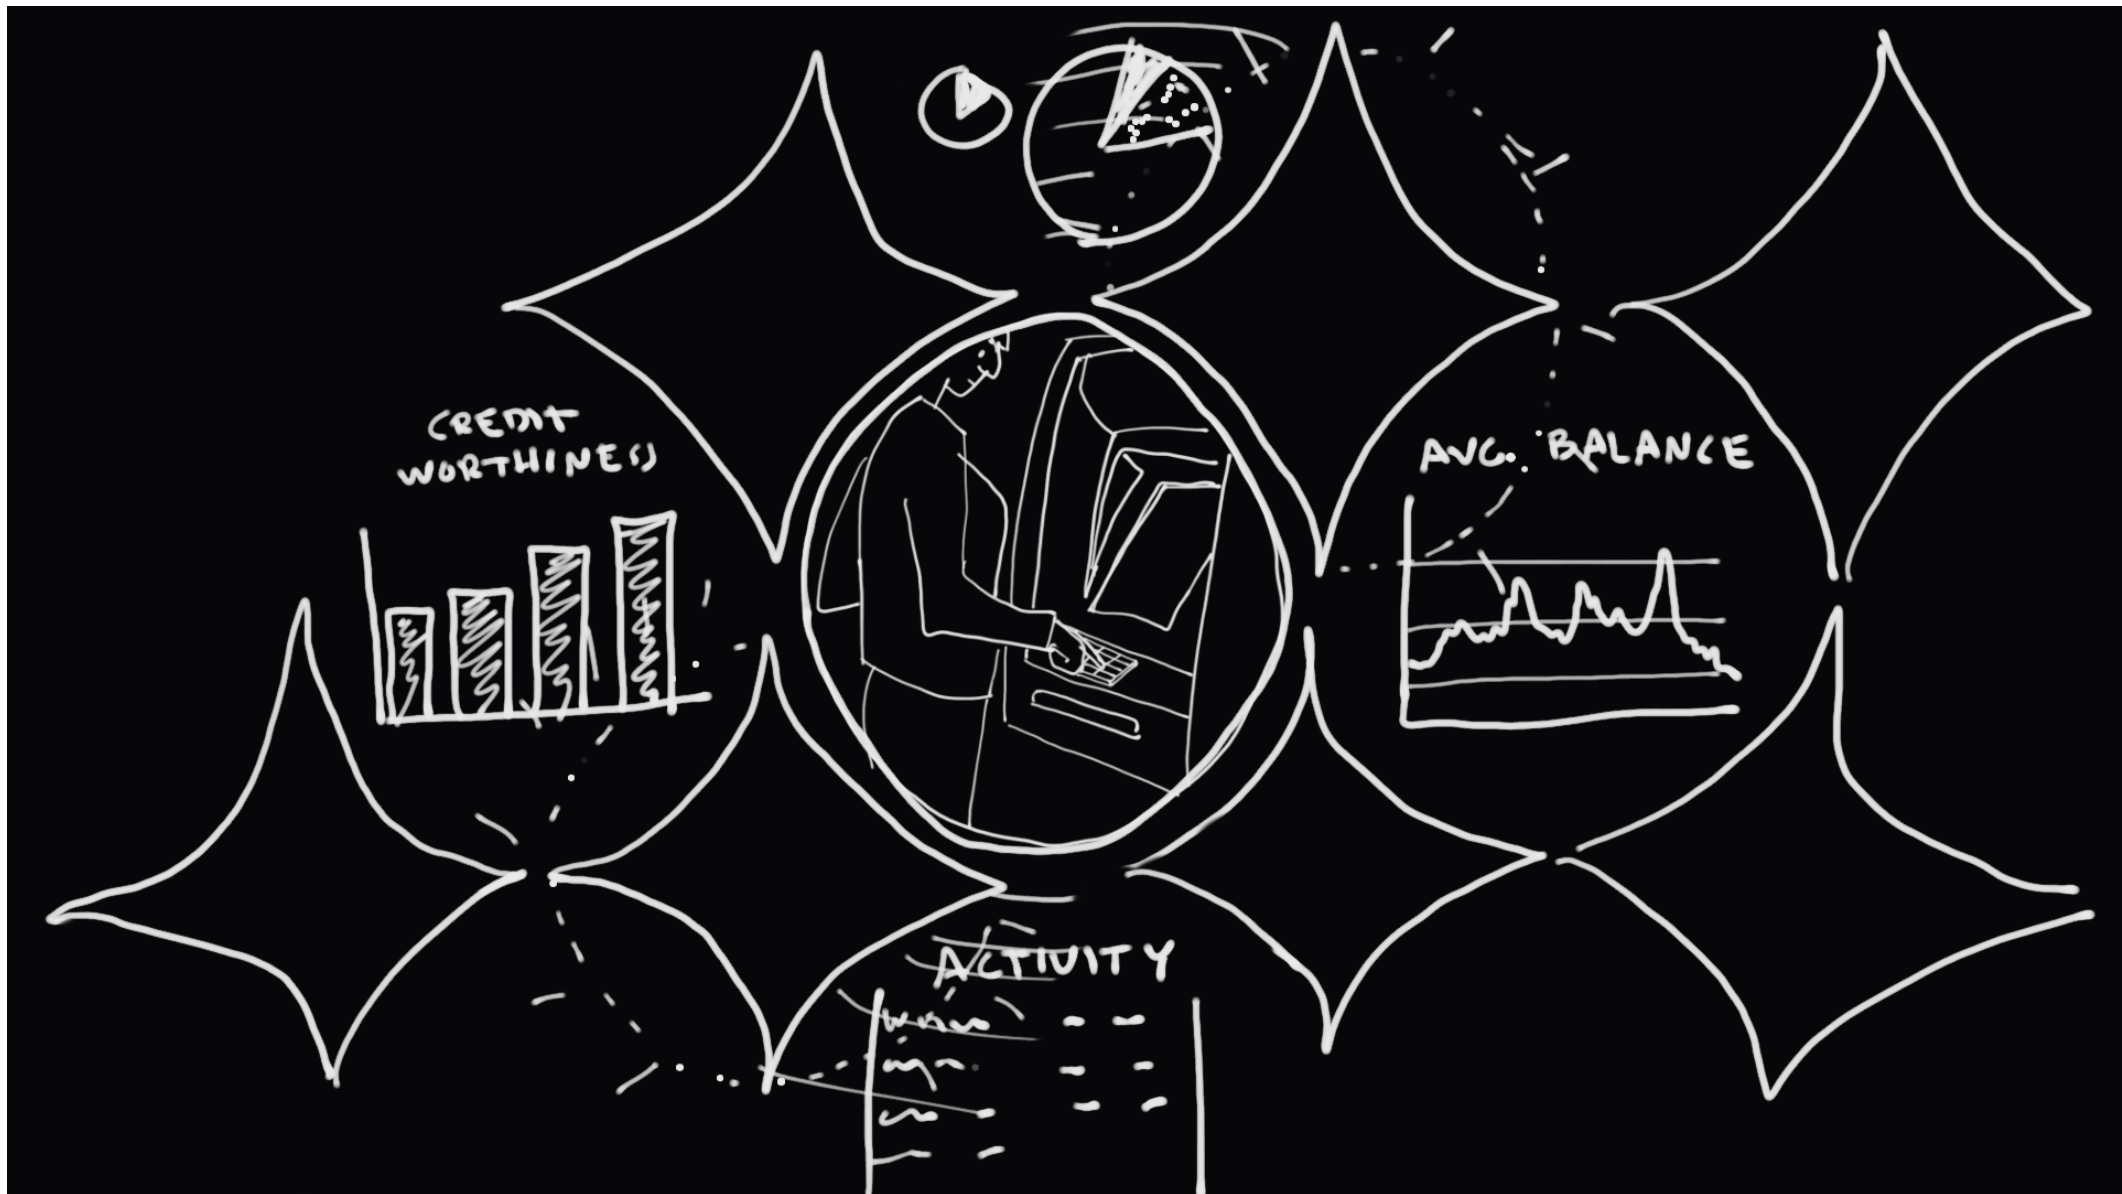

Build the intelligent applications your users demand
with an open-source data platform.

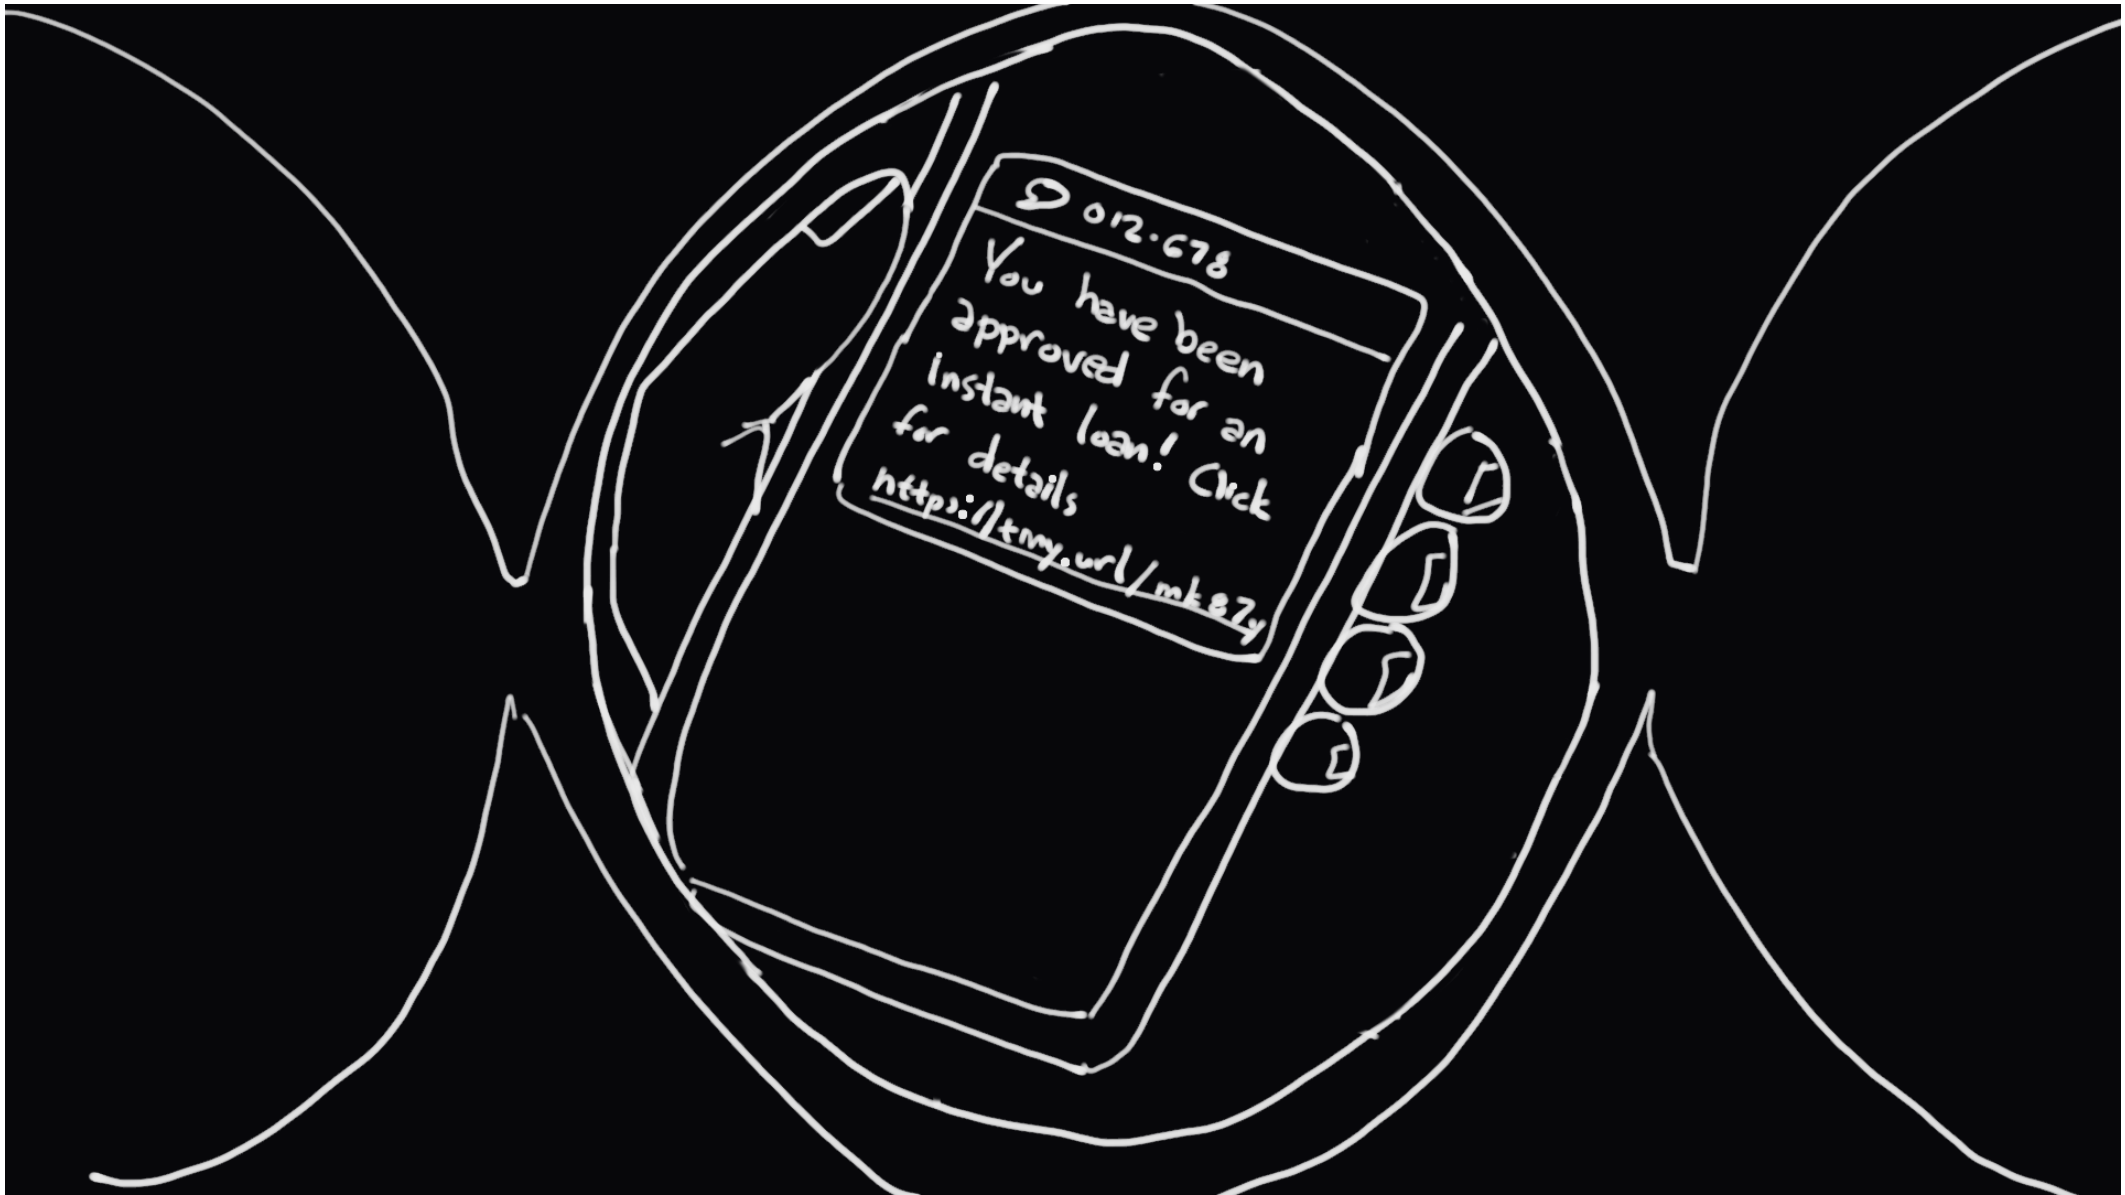

With real-time processing, a bank seizes an opportunity by offering loans to customers...

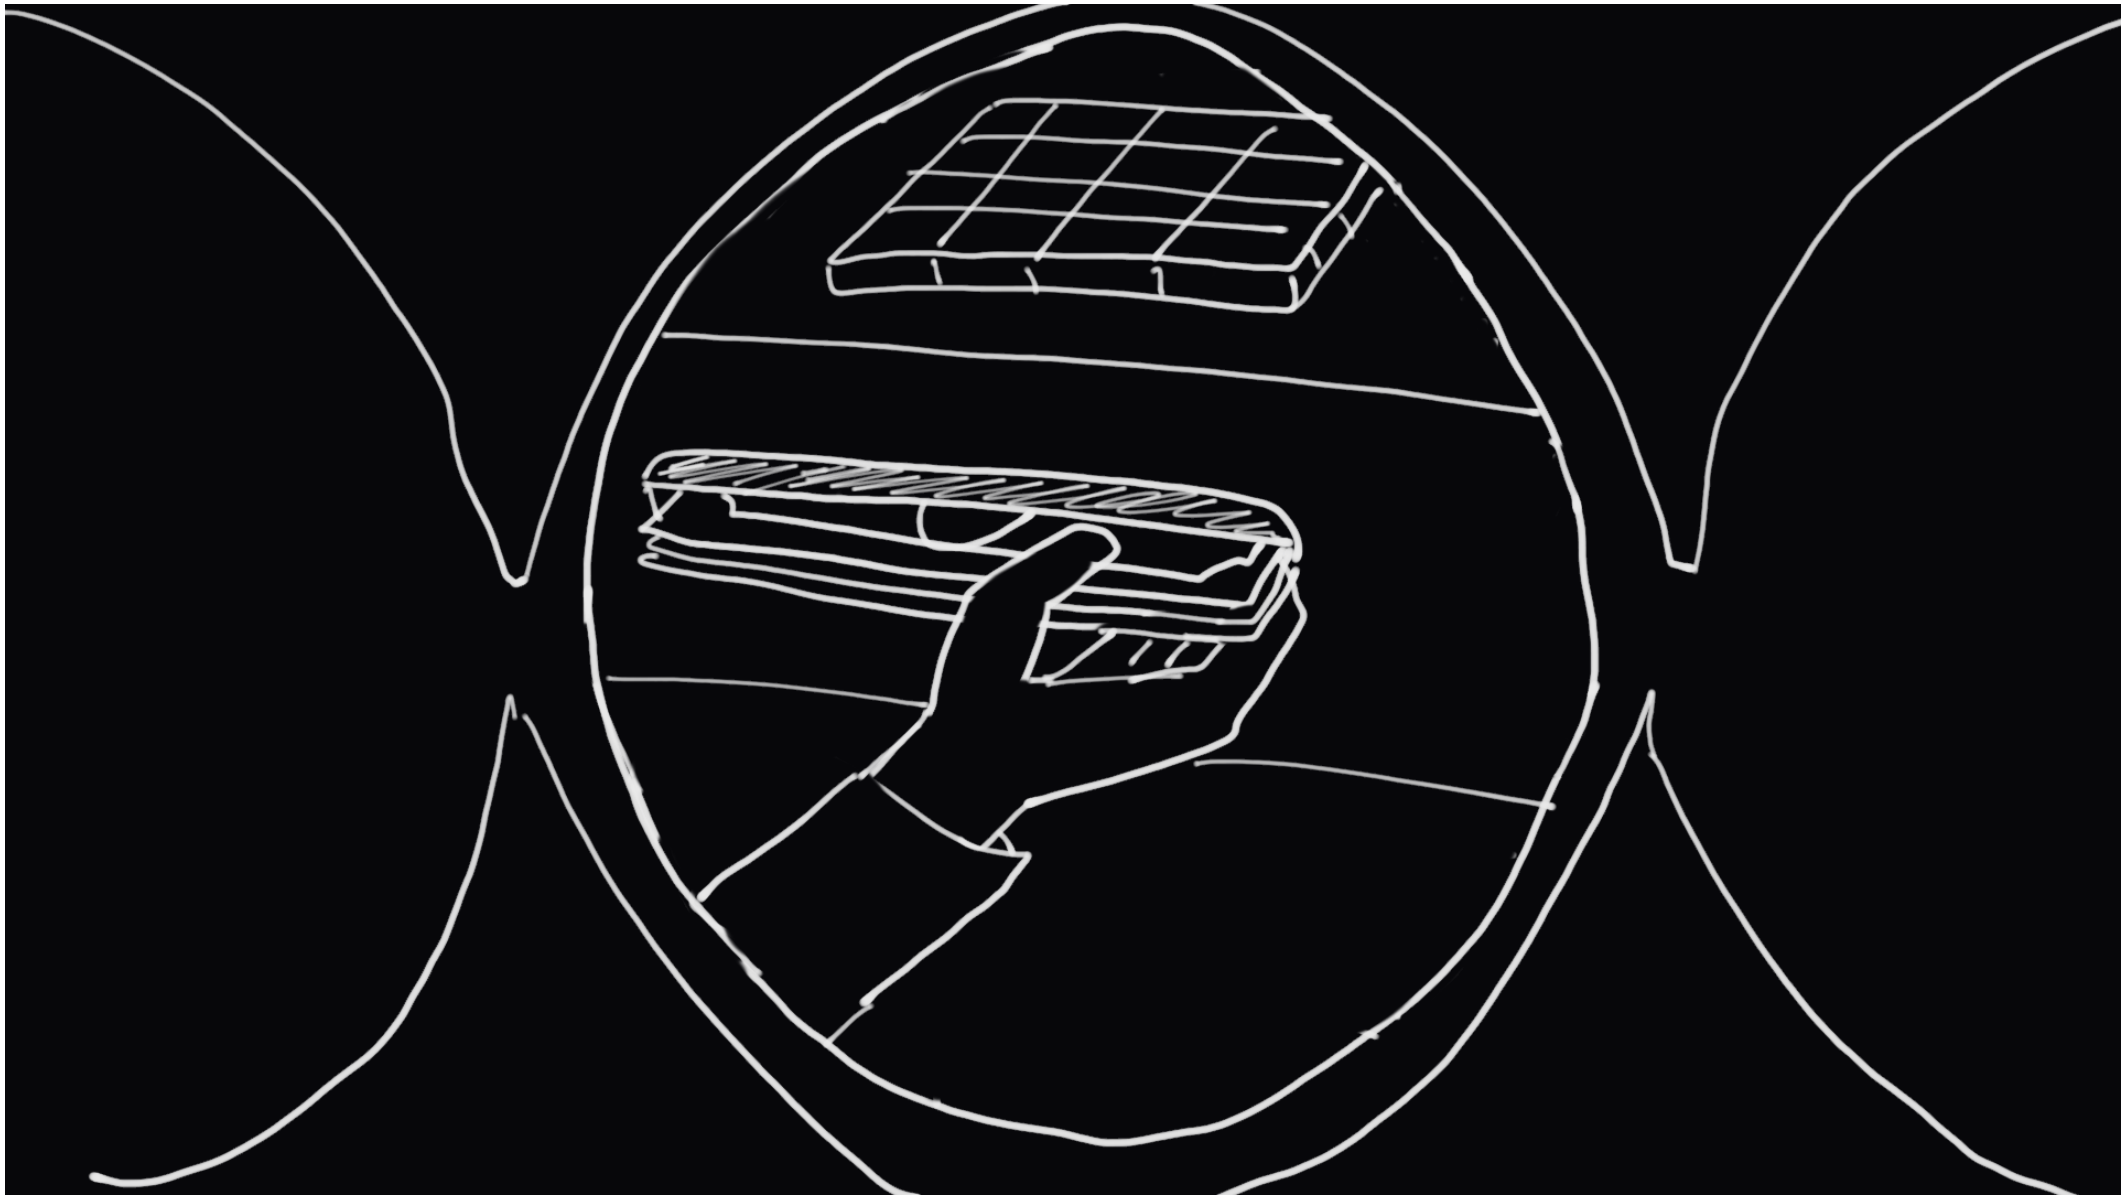

...getting notified of insufficient funds.

Real-time analysis provides a contextual understanding of the customer.

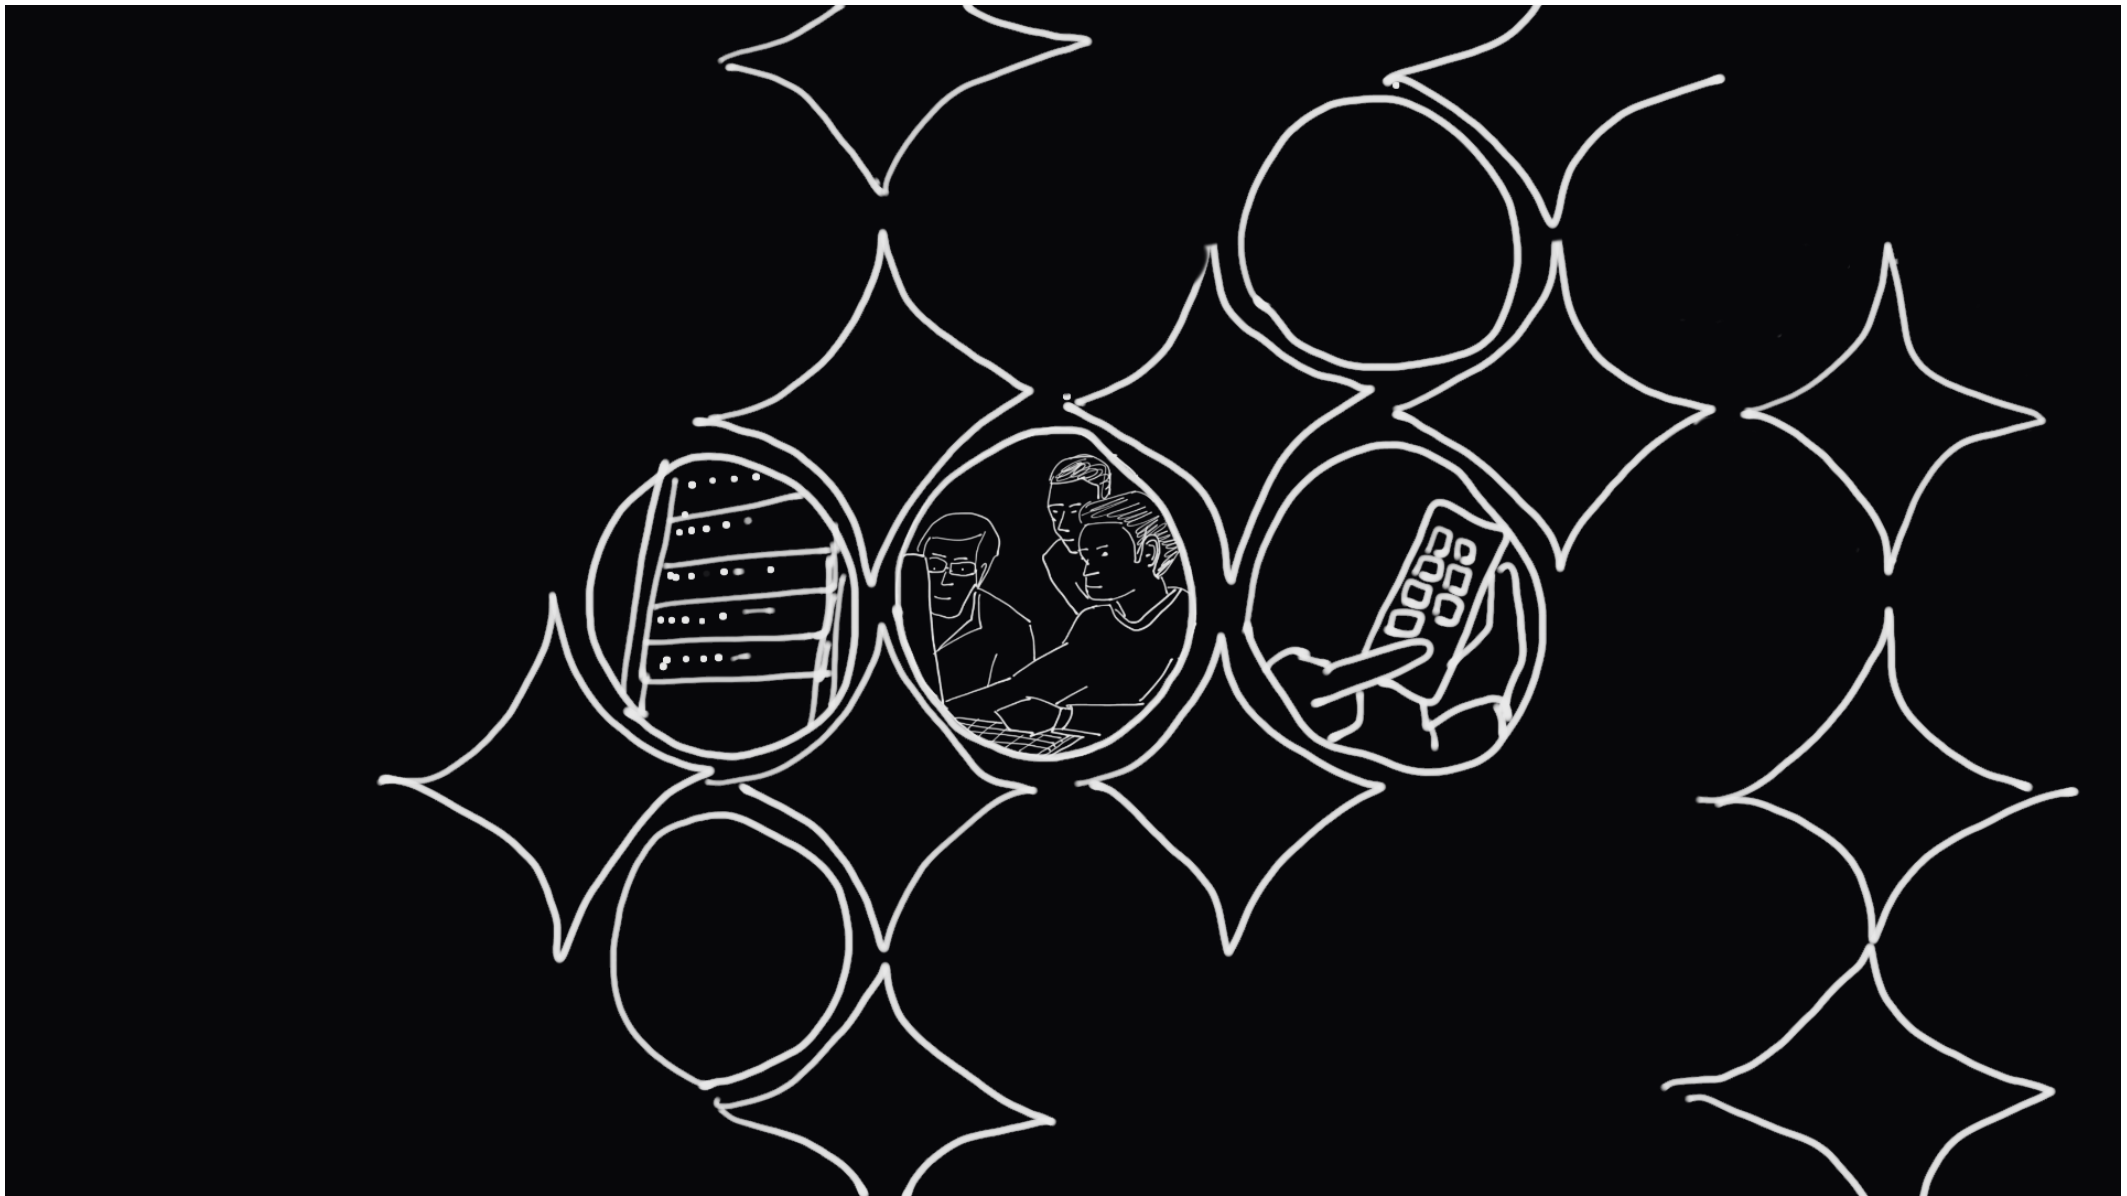

And a loan is offered.

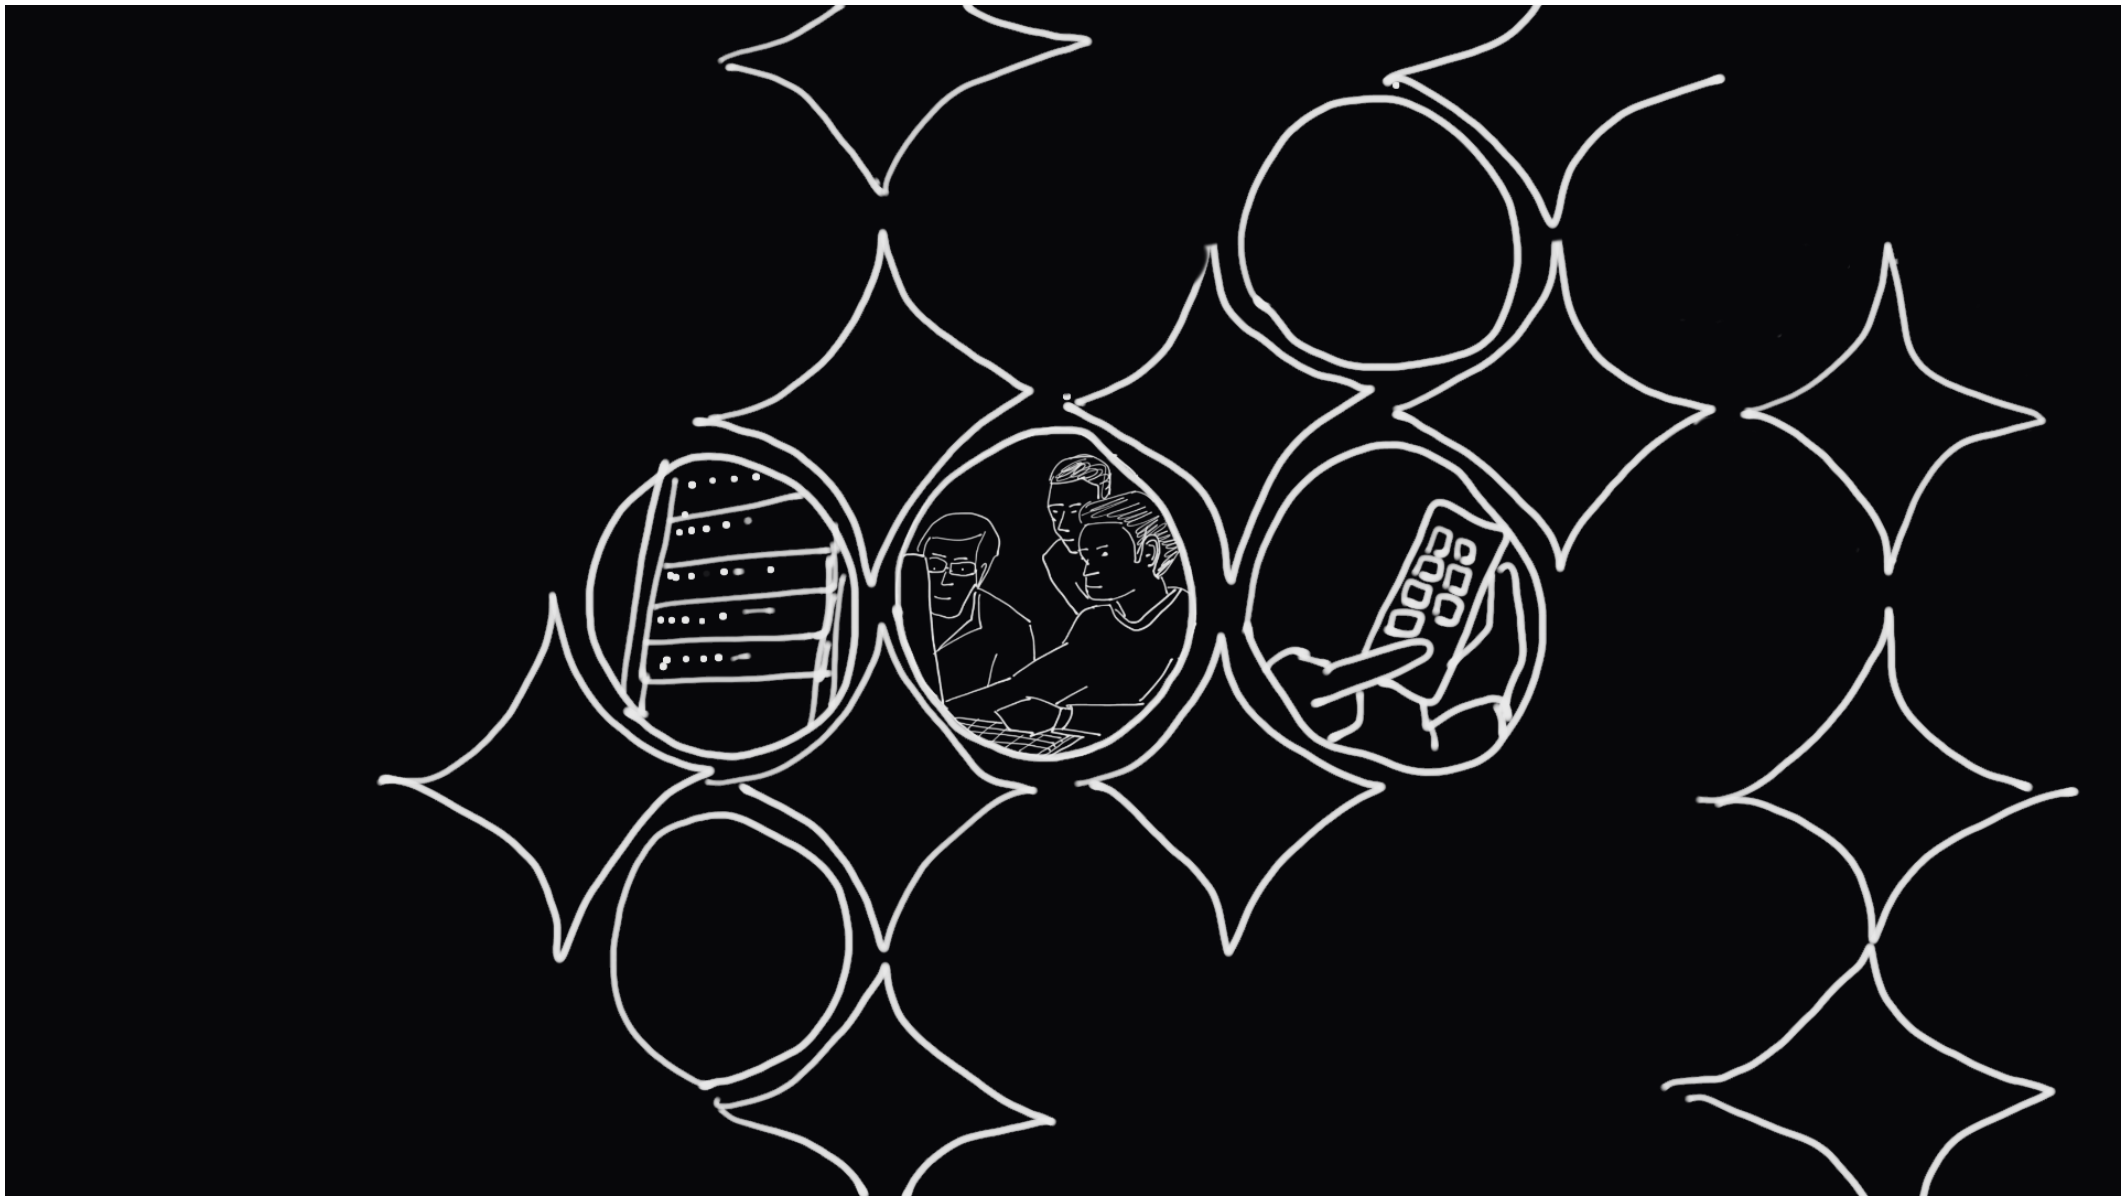

The “right offer at the right time” boosts conversions.

Reaching customers in the real-time enterprise
requires fast, scalable access to data.

An in-memory data layer between the backend and new apps...

...reduces latency and boosts throughput.

Machine learning, artificial intelligence, microservices, digital integration hubs...

HAZELCAST

Any situation where your systems are not fast enough, Hazelcast can help.
